CD20 is a transmembrane antigen that is currently under investigation as a potential target in B-cell malignancies. Previous studies have shown that CD20 is expressed by the majority of B-cell neoplasms, and that immunotherapy directed at this surface antigen is effective in treating B-cell lymphomas. Data from our laboratory and from others demonstrate that residual normal and reactive B cells in lymphoid organs and sites of inflammation express CD20, suggesting that these cells may be a potential source of CD20 expression in hematologic malignancies. In this review, we have sought to summarize the clinical and laboratory studies that have thus far addressed the role of CD20 expression in the pathogenesis of B-cell malignancies and the potential for immunotherapy directed at this antigen in hematologic malignancies.Heretofore, a variety of large-scale variable air volume type ducted air flow heat exchangers have been proposed and marketed, all of which are based on the use of heat exchanger tubes or fins which are placed in heat transfer relation with a circulating air stream in order to effect a heat transfer relationship with the circulating air stream as it moves through the heat exchanger tube or fin array. In all of the known prior devices, the heat exchanger tube or fins has a plurality of parallel fins between the open ends thereof, the parallel fins being positioned in rows which extend transversely across the air flow stream in order to direct the air flow transversely across the fins and through the fins in a direction generally along the

longitudinal center line of the heat exchanger tube. All of the known prior devices have air flow passages which are linear in cross-

While it does not provide any specific information about the capacity or the state of charge of the battery, it can be used to check the availability of power. If nothing else, you can use BatteryMonitor to quickly shut down your PC, or even to hibernate it, if you need to save the state of your Windows operating system. Your battery has a life, and that life can be roughly described in percentage points. When the percentage of remaining charge reaches a certain point, the battery is considered to be dead. It is at this point that the battery will not have the ability to charge any more. BatteryMonitor does not provide any information about battery capacity, or about the state of charge. However, it can be used to quickly shut down your PC, or to hibernate it if you need to save the state of your Windows operating system. ViveBatteryMonitor makes it easy to check battery performance and status. You can view both the voltage and current of the battery,

and you can use the app to adjust battery life or power options. After installing the ViveBatteryMonitor app, you need to configure a few options. This includes selecting a battery type, and then setting a range for monitoring voltage and current. You
