IE_Connector is a simple app to help you debug and see the contents of the html of a browser. It's based on the IE development model. Gain access to the actual iElement created by the browser. IE_Connector allows you to inspect all values on all html elements. Paste any code into the script tab Start debugging the code

Save the code to see the results immediately on the website Run the code by Clicking the Play button. Create templates to code the design of the application IE_Connector is a runtime application that will work in a web server like Apache, IIS, etc. Additional functionality of IE_Connector includes: Scripting, Debugging, Code testing Add user scripts, ie script and doctype, New

Functions added to IE_Connector,
Other Features to come soon. Top
Features of IE_Connector Run the
code directly on your browser Paste
any code into the script tab and
IE_Connector will run it for you.
Debug your code Start with an empty
IE Window and run your code on
IE_Connector. Run IE_Connector
code directly on your browser Add
your IE_Connector script to a web

page you wish to test. IE_Connector will run the code directly on the page you have added it to. Crazy code performance in IE_Connector Code written in IE_Connector will use IE capabilities to run faster than any other program. IE_Connector was designed from the ground up to make sure it's performance matched all other browsers. Browser / Internet Explorer Settings For IE_Connector

to work you will need to have Internet Explorer settings.

IE_Connector uses Internet Explorer engine to debug the code. So make sure that you have internet explorer settings so IE_Connector can run with the maximum speed. Now go to Internet Explorer Settings and open the Internet Options window. Now click the Advanced tab, and make sure the Settings are as follows:

IE_Connector is based on IE Development Model. IE_Connector code will be loaded into the Local window. If you have trouble debugging with IE_Connector, make sure that you turn off the option to run ActiveX. IE_Connector is not in the IE Toolbar or Favorites menu. Go to the Tools menu and create a new tool.

====
====
==== This plugin provides a new set of tools for debugging and scripting an Internet Explorer. The IE_Connector application was designed to be a runtime debugging and scripting tool that will give you access to the internals of a IE

Window running on your computer.
IE_Connector allows you to inspect
all values on all html element.

Features: =====
=====

===== With this plugin you
have the following features: ##

Injecting data into your webpage To
inject data into your webpage using
this plugin you need to use the
window.location.toString() function.

`` //Injecting data into your webpage
window.location.toString(); `` You
can use any of the HTML5 data
attributes (example: data-content-
type=`image/png`) ## Displaying
data in an alert box If you want to
display your data in an alert box you
need to use the
window.location.hash.value property.
`` // If you want to show some
message in an alert box alert(" +

```
window.location.hash.value + "); ``  
## Checking a specific html element  
If you want to check a specific html  
element, You can use the  
window.location.hash.id property  
For example, `` //Checking if the div  
with id="Header_Container" has any  
child tag if(window.location.hash.id=  
="Header_Container"){ alert("The  
element with id="Header_Container"  
has a child tag"); } `` ## Copy
```

element attributes into clipboard The script copies all the attributes values to the Clipboard `function

```
myFunction() {  
  window.location.hash.id; //or window.  
  w.location.hash.data-content-type  
  window.location.hash.data-title //or  
  window.location.hash.data-content-  
  type="dynamic" window.location.has  
  h.data-title="What is the weather  
  like today? " } `` ## Injecting data
```

into your webpage To inject data
into your webpage using this plugin
you need to use the
`window.location.toString()` function.
“
