X-Art HD Pro Plus With Twin Lens Pro will transform your Canon DSLR into a stylish and powerful media recorder. The powerful live video monitoring features, intuitive editing and time-lapse controls provide professional results you can instantly share with the world. With a dynamic range of up to 6.3 EV in HDMI output, X-Art HD Pro Plus With Twin Lens Pro is the ultimate companion to your DSLR. The X-Art PRO Plus video monitor is a powerful multimedia recording solution for your camera. If you're a filmmaker, this is a must-have recorder. You can view your video playback on the monitor, in a window on your computer or even on your smartphone. You can even view your camera's live view on the monitor with the HD CCD sensor. You can perform image level adjustments to the video as you record, and then view the adjustments in real-time. Plus, you can edit your recorded video using X-Art tools like time lapse, chroma key, and frame interpolation.

7. HD Color Correction Pro - A professional video color correction and conversion tool for users to make professional video with utmost ease. It supports all popular video formats, including H.264, MPEG, WMV, MP4, and MOV, with excellent batch conversion and fast speed of converting up to 100 clips per second.

8. Stabilizer - Many people nowadays have troubles holding their cameras steady. With the Stabilizer feature, you can turn to this invaluable tool. The video stabilizer does exactly what the name implies -- it helps to stabilize the camera motion when filming. Simply by pressing a key, the camera will automatically adjust the gain to the shot and stabilize the video.

9. Video on Windows PC - If you connect your Canon Digital Rebel XTi to a computer via a USB cable, the Video on Windows PC feature will be activated automatically. This tool can burn videos to CD or DVD, or save them to an external hard drive, all for you to keep as a digital backup of your footage.

10. Background Recorder Pro - You can have the Canon Digital Rebel XTi record the audio on your computer, so that you can still record while doing other work. The Background Recorder Pro feature is a great tool for people to play back a demo while recording audio.

11. Movie Lens - Movie Lens is a smart application that helps you shoot, view, and share more movies. The movie lens app is a free, simple

ProjectX Crack +

===== ProjectX is a reliable and useful Java based-demux utility that provides you with a better preview behind the digital radio and television transmissions and tries to repair many stream types. The application can be operated via a graphical user interface or using the command prompt utility so it comes in handy for both beginner and advanced users. As we know, in digital television, we don't see the produced image exactly as it is in reality. Actually, the whole TV picture will be compressed and edited before transmission and sent as digital data stream (MPEG2 transport stream) so here ProjectX comes in handy. With the help of ProjectX you have the possibility to check for overlapping PVAs when reading the broadcasted files, ignore scrambled packets, concatenate different recordings, rename all MPEG video and audio files, as well as to patch all recorded frames. Because of its intuitive interface and well organized menus, ProjectX enables you to decode hidden rows, keep original Timecode on independent decoding, dump dropped GOPs to separate files and view all the subtitles. All things considered, ProjectX is a useful demux utility whose main purpose is to help users analyze TV and radio transmissions so it can handle various video and audio streams. Description:
