Sep 26, 2013 City Multi Design Tool 4.41.0010Q: How to take the value of two elements in XML file on Android I have this element in my XML file Now I want to take the value of the id and assign the text to it. I have tried this public void onItemClick(AdapterView parent, View view, int position, long id) { TextView screen = (TextView) view; TextView button = (TextView) screen.findViewById(R.id.btn\_ $\_q$ ); button.setText("New Text"); } but it does not work. A: Use this instead. TextView screen = (TextView) view.findViewById(R.id.btn\_ $\_q$ ); screen.setText("New Text"); Q: What is the probability that player SPS has the highest number of points Suppose the players are SPS and SQS and the total number of points SNS. Then each player has SNS chances to be the winner of the game. What is the probability that SPS has the highest number of points? I know it is a bad definition but I am not able to think of a better one. A: Well it sounds like the total number of points SPS can win is not necessarily a multiple of the number of points SQS can win, so it would be difficult to define a probability. Even if we assume this total number of points SPS can win is a multiple of SQS wins, let's assume the number of wins is SkS and the number of losses is SN-kS, then it's easy to find the probability of the loss of SQS: it's the probability of the loss of SkS consecutive wins, which is just  $\frac{1}{N-k}$ . So the probability of SPS winning is then  $1 - \frac{1}{N-k}$
