Office Add-ins provide a scalable and efficient programming model for Microsoft Office applications such as Excel. By using add-ins, programmers can extend the functionality of an application without requiring end users to modify the application’s executable code. Using Excel’s APIs, add-ins are able to add new chart, text and formatting, content and application data types, and change formatting of existing objects within a worksheet. Getting Started: First, you need to install Office Excel Add-ins SDK and create a new Excel project in Visual Studio. Project Setup: To get started, you need to create an Office Excel Add-ins project for your project. To create an Office Excel Add-ins project, simply right-click on the existing project in Solution Explorer and click Add > New Project from the context menu.
