AutoCAD is used in construction, architecture, mechanical engineering, civil engineering, industrial engineering, architecture, interior design, graphics, transportation engineering, graphics, construction, manufacturing, and many other industries. Many of its feature are not available in most competing free and open source CAD software packages. Contents show] AutoCAD history AutoCAD started out as xCAD, released in 1976 by a little company called Solid Software. Originally written in Lisp, it was ported to DOS, and was one of the first applications to use pixel graphics (the other being another Solid Software product called SuperPaint). Pixel graphics was a revolutionary step in the development of graphics software, and was a milestone in the history of DOS graphics. The alpha-numeric text, filled polygons, and shaded surfaces were all part of a single graphics system. In 1980, the Solid software founders sold the company to Graeme Hart, who founded Autodesk. After a name change, xCAD became AutoCAD, and Solid software became the AutoDesk division of Autodesk. AutoDesk launched Autodesk University, offering a computer-aided drafting and design program to the general public. For many years, AutoCAD was an only product of AutoDesk, being all that was offered. Over the years, however, many new products have been created that are available from AutoDesk. For example, AutoCAD LT for the smaller and cheaper market is offered. In 2016 Autodesk announced that it will no longer support Mac OS versions of AutoCAD starting in April 2017, with Windows and Linux versions continuing to be supported. Trademarks AutoCAD is registered in the United States Patent and Trademark Office (USPTO) under number 6482088, issued September 3, 2003. The term 'AutoCAD' is owned by Autodesk, and is considered a brand name. The rest of the product's trademarks, however, belong to Autodesk Inc. Autodesk Inc. (ADI) is a US corporation based in San Rafael, CA, and was previously Autodesk, Inc. Licensing AutoCAD was first released in 1982 as a desktop application. By 1992 it was released as an ASP (Active Server Pages) application for Microsoft Windows (starting with Windows 3.11) and as a VB (Visual Basic) application for Microsoft Windows (starting with Windows
