

Using T4 To Generate Enums From Database Lookup Tables

Using T4 templates to create enums from database lookup tables. How is a simple type provider in F#? I hope Roslyn allows the community to do more. T4, NET was really great, but I couldn't find out how to use it in F# even though I know it should be very similar to other patterns like Factory etc. I didn't find any documentation even on the net, so it's not that broad. I'm using Visual Studio 2008 F# as my IDE, but I can't find a tutorial or example on how to use T4 templates to create enums in F#. I know you can write the template in a single file, but that doesn't seem like what I want.
