The mannose-binding lectin (MBL) specificity of a serum with MBL activity was examined by affinity chromatography, by measuring inhibition of hemagglutination in microtiter assays, and by measuring MBL-mediated inhibition of hemolysis and cellular C3 deposition. This serum showed only one type of specific reaction. Hemagglutination by the human influenza virus A/WSN/33 (H1N1) was inhibited by MBL-bearing rat serum in a dose-dependent manner. Hemolysis of erythrocytes by influenza virus was inhibited by MBL-bearing serum, but not by the MBL-deficient serum. C3 deposition on cells by influenza virus was inhibited by MBL-bearing serum, but not by the MBL-deficient serum. The results demonstrate that MBL-bearing serum recognizes specific microbe

What is Graphic Design? What is Graphic Design? Graphic design encompasses a wide range of visual communication techniques including typography, photography, illustration, packaging, animation, and motion media. Within this broad definition of graphic design, there is a more specific distinction between graphic design and web design, linked to the use of both digital and traditional computer-based tools. Depending on the medium, different design and implementation techniques are used to achieve the final result. Graphic design dates back to the beginnings of writing; the development of calligraphy and the composition of writing, such as letters and numbers, was based on the arrangement of geometric shapes, including squares, circles, triangles and lines. The order of the shapes in the composition was based on the aesthetic values of the time, with basic elements such as
