In April 2012, Autodesk announced AutoCAD LT, a free version of AutoCAD software for Windows, macOS, Linux, and Android tablet and smart phone devices. The free software includes most of the features of AutoCAD and is cross-platform. This software is available for Autodesk's subscription-based AutoCAD service, the cloud, and as a free download. Both AutoCAD and AutoCAD LT are part of the Autodesk (AEC) family of products. In June 2015, Autodesk announced the acquisition of the PCB design service from M&CAD. In August 2016, Autodesk announced its intention to acquire the British company Vectorworks. Vectorworks currently competes with Autodesk solutions. Vectorworks is a company formed by former Autodesk employees and will remain headquartered in Brighton, England. History Autodesk released AutoCAD in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. In 1987, Autodesk published a version of AutoCAD that was able to recognize and import the outlines of objects, including holes, but excluded rectangles and circles. This version was originally called AutoCAD V or Autocad V. In March 1998, the first version of AutoCAD was shipped with a 21.5-inch (541 mm) flat-panel display and other standard features such as AutoTrace and the ability to display and edit many formats of drawing data. In May 1999, Autodesk introduced AutoCAD 2000, a new version of AutoCAD that was in some ways the "phoenix" from its previous version. Like its predecessor, it was capable of reading the outlines of 3D objects in a drawing and editing polylines. In January 2001, Autodesk released AutoCAD 2002, a new version of AutoCAD that introduced the ability to edit non-rectangular objects, such as circles and ovals, and included new geometric functions. In September 2003, Autodesk introduced a new user interface for AutoCAD and AutoCAD LT that made it easier to use commands, especially for new users. In May 2004, Autodesk announced AutoCAD Architecture, a

United States v. Washington, 434 F.3d 1114, 1120 (9th Cir. 2006). In imposing a revocation sentence, a district court may consider facts admitted in a stipulation. United States v. Tapia-Romero, 523 F.3d 1029, 1031 (9th Cir. 2008). Here, the district court did not plainly err in considering the stipulation. First, the stipulation recited the terms of the probation that Defendant had violated, and the district court adopted those terms in its oral pronouncement of the revocation sentence. Second, the probation officer provided accurate, detailed, and uncontroverted information about Defendant's probation violations in the presentence report. See United States v. Carter, 560 F.3d 1107, 1120 (9th Cir. 2009). Third, Defendant does not claim to have denied any fact in the stipulation, but only argues that the district court improperly relied on Defendant's statements to the probation officer because Defendant did not know the probation officer could not share Defendant's statement. This argument is unavailing because the district court was entitled to consider the admissions made by Defendant to the probation officer. See id. Finally, the sentence imposed was reasonable. The district court properly considered the sentencing
