Multilingual Medic Â· epon  
adjustment program rx595.16.  
2021å¹´1æœ²7æÅi. Manual  
vacuum breaker Manual vacuum  
breaker is a type of electrical  
switch that interrupts power to an  
electrical circuit when the system  
vacuum (ambient air pressure)  
drops below a predetermined  
threshold. The device is an  
electrically operated mechanical  
vacuum breaker consisting of a  
ground metal seal attached to  
one side of a glass bulb, an  
insulating support member on the  
other side of the bulb, and a lever  
linkage connected between the  
two. The bulb's sealed end and  
the lever are connected by a  
coupling. The lever is hinged to a

---

fulcrum pin, and is attached to the lever link with a screw. The linkage moves the lever with a spring provided for smooth motion. The device is a simple and inexpensive control for manually turning off electrical power to a vacuum circuit that is susceptible to accidental open-circuit which will allow air to enter the vacuum circuit. This device is widely used, but has disadvantages. The connector between the glass bulb and the lever link can break off. It is also possible that the glass bulb can break. Other switches can be employed to reliably operate the vacuum breaker when the circuit is switched back on. Commonly

---

employed include a mercury switch that opens when the vacuum on the circuit is greater than the ambient atmospheric pressure or spring switches. Manufacturers may offer a variety of reset values, e.g. 125, 130, 140, 150, 170 or 175 cm, which can be selected at the time of purchase. Values up to 250 cm are available in various special applications, such as low-barrier applications and in low-stress panel mounting applications. The reset range is also selectable based on the number of power circuits being protected. Use Manual vacuum breakers are used where vacuum, or low air pressure, is a source of safety or

---

protection from pollution, or where manual operation is necessary to cycle electrical circuits on and off. Manual vacuum breakers are typically installed in air filter systems, vacuum ovens, vacuum pumps, and air-assisted chiller systems. A manual vacuum breaker can be used to turn off systems that require immediate emergency shut-down, such as automotive emissions control systems
