

When you play on FIFA 22, your movements are brought to life through a 3D animated layer so you get a realistic experience. Whether it's the follow-up ball, animation of an attacking move, player speed and movements, passing, dribbling, heading, shooting and more, all of this is now more real and more believable. It's like having a virtual extension of you in the game. HyperMotion Technology will be fully integrated into FUT. This is the first time that it has been used as a new gameplay element in soccer video games. It ensures that every facet of gameplay replicates what happens in a real-life game. If you feel like the game is too slow or too tight, it's because you're wearing a motion capture suit. The movements that you show will be quite natural – it's like a giant video game you can play! The movements that you make will replicate the real-life motions of the person wearing the suit. That means that you will be able to make more precise moves as if you were the real player. The action will feel more authentic. The motion capture data that was captured during the real-life stadium matches is used to animate the lower body. This means that body movements, changes of direction, lunging and turning, will feel more authentic. It's not like before when lower body movements were rigid and players could only run in place, you can run and turn along with your teammates. This will add more realism to the game. In order to deliver HyperMotion Technology, we needed to develop and use a new motion capture suit and capture a whole stadium match for our research. This is something that only a handful of studios have done. All of this is new and very cutting-edge. The technology itself is not the hard part, but capturing the exact movements of a footballer at a stadium match is a task which we have never done before. We needed to capture the exact footsteps of one player and match these movements with the movement of millions of players to create an immersive game experience. And all of this was captured during a very intense stadium match. These are new, more precise movements which you can use to add a whole new dimension to gameplay. It's easy to imagine that one of the soccer players in the stadium was a soccer superstar. Or perhaps they were an accomplished professional football player. The

What's new in Fifa 22:

- **Improved Player Link: In FIFA Ultimate Team, your progress is only shared with one player per squad - making it easier to swap between them. This means you get a closer look at their attributes and actions, and the new details in their appearance will make you want to swap them out.**
- **Ball Physics: Improved ball physics means the new ball behaves more naturally, passing more smoothly and feeling lighter. This also gives the ball a more realistic look as you control it, helping to make every pass feel more meaningful.**
- **Team Training: By assessing your club's playing style, the AI will adapt over the course of a campaign. You can also de-clutter matchday sessions by removing unnecessary and uninvited guests.**
- **More Enhanced Offsides**
- **New Commentary Team**
- **More in-game communication including: Improved Fantasy Players, Season Updates, Squad Appearances and more.**
- **Improved Eco-System**
- **New goal celebration animation.**
- **New Visualization, Grid Lines and other match visual enhancements in FIFA Ultimate Team.**
- **New set pieces.**
- **Two new stadiums: Allianz Arena and MetLife Stadium**
- **World Cup and Olympic Game Modes**
