The game has an experience based loot system where a player with the most

experience will get better loot than the rest of the players. The experience you gain can only be bought with real money. On every planet you find asteroids and rocket heads. Rocket heads will generate it's own energy to power your gun turret. Asteroids on the other hand will power your turrets shield and will take longer to destroy. Using the button to the left will power your laser gun. The button on the right will power your shield. By pressing the "fire" button you will release the rocket towards the object and destroy it for the amount of points you have. The new money you earn while on a planet will increase the level and the loot you

are getting will increase. You get a certain amount of points for every weapon you shoot an asteroid with and for every hit you get. The higher your score is the better you will get. There is also a random event happening everyday. You will get a rating for every planet you visit. I will update my game when I get higher ratings with new content to add. I will release videos of my gameplay in the next days aswell as a big update in December with lots of new content. I hope you enjoy the game and as always: feel free to ask questions, I'll try my best to answer them. -Lone Ranger -If you want to support me, consider contacting
