I chose the C# programming language for the project as it is the most popular one in the Microsoft world and, in addition, I liked its syntax. I was also interested in x64 architecture, as it is the best suited architecture for computers, laptops, and desktops. Many of my friends used to think that I was crazy for choosing to develop this native app for Windows. However, I really wanted to be useful to others, as that is what matters to me the most. And what do I achieve when I conclude the development of my native Windows app?
