This page will cover the basics of editing in Adobe Photoshop. For more detailed information about the software, please see the Adobe Photoshop Elements 6/CS5: Tutorials and Help page. Operation Photoshop can be used in three different editing modes:

- The On-Screen Color Picker mode
- The The Quick Selection and

---

the Magic Wand modes • The The Grayscale and the Black and White modes Note that you can work simultaneously in all three modes, but you can't select what kind of editing you want to do in the middle of an image. If you want to edit something in one of the three modes, you have to exit the editing mode that you're in and select your image in the On-Screen Color Picker or Quick

---

Selection modes. The following topics are used to cover the different ways to go about editing in Photoshop, with an emphasis on the features of the program. The Color Picker The Color Picker is an image editing mode, similar to the Live Color and Live B&W modes that are provided in The Quick Selection and Magic Wand editing modes. If the image you are editing has a color mode selected (For

---

example, if you're using Adobe RGB or Adobe CMYK), you can use the Color Picker mode to see the colors of any selected object in the image. If you have a black and white photo, or if you have the color mode "Indexed", which is the default mode when working with JPEG files, you can use the Color Picker mode to see the hue and saturation information for any selected object in the image. The

---

following topics are used to cover the Color Picker, Live Color and Live B&W modes:

- The Color Picker Mode
- Images in the Color Picker Mode
- Adjusting an object's hue, saturation and value in the Color Picker Mode
- Working with the Color Picker's Masking and Color Selection modes
- Adjusting the level of color cast
- Working with the Color Picker's Layers Panel
- Working with

---

the Color Picker's Histogram • Image Editing in the Color Picker Mode

Note: An important feature of this mode is the ability to edit the Hue and Saturation parameter of objects in a photo. This is covered in the section about adjusting the Hue, Saturation and Value for a selected object in the

Q: VBA - Copy/paste styles to sheets with same name (Conditional format)  
The issue I am having is I have a style on a specific cell in a specific column. I would like the cell to have this style when it is in the filtered range. The problem is that the style sheet is called "Row Count - Money" and is applied to each and every sheet that has the

---

same name. I have tried changing the name of the sheet, using Active. This works but seems like a bad solution. Is there a better way? A: If you are OK with manipulating the Sheets collection, you can do something like

```
Sheets("sheet1").Delete  
Sheets("sheet1").Name = "Row Count  
- Money" With Worksheets("sheet1")  
If Not.AutoFilterMode Then  
.Range("A1").EntireRow.Copy
```

---

`.AutoFilter .Range("A:A").SpecialCells(xlCellTypeVisible).Offset(1).PasteSpecial .Columns("A:A").AutoFit End`  
If End With Sometimes, it's the little things that matter. When a team can't think about their own success, the first questions that come to mind are, what are the flaws in the opposition's play? Who are their weaknesses? And how do they defeat us? This is where the Chicago Fire need to start their prep

---

for the 2014 season. This is where the 2014 Chicago Fire need to start. The Fire played a ton of soccer last season, but there were still times when they couldn't stop other teams from playing a certain way. When those other teams took advantage, it opened the door for the Black and Red. As we move into preseason, there are a few things the Fire need to get straight. It's not enough for Ben Olsen to watch the

---

game from the stands and say, “well, we tried that – we’ll do this instead.” As we approach the start of the year, we need to understand that the 2014 Chicago Fire are starting from square one. Starting is incredibly important. The team is comprised of players with an assortment of experience, and the
