As the title says I have a problem with my query, the query is working on phpMyAdmin but not in my site, I am using the code from within the website, but the query is not returning the results. Here's the code: try{

Top 10 Fattest Popes Today I thought that I should mention

that, in a recent study, the University of Pennsylvania researchers found that the most Catholic males in the history of the world are, of course, currently popes. Apparently the link between smoking and health never occurred to them. Here are the top ten: The first three are all contemporary popes who made it through their papacy without bursting into flames, presumably due to a combination of prayer and deodorant. But the past two guys either didn't survive to the present day, or didn't live to such an age. In fact, of the ten worst popes, only one—maybe two, if both lads in the picture were really hot—had a lifespan to match the length of the human papal dignity.

Patterns of care of esophageal cancer patients in Emilia-Romagna, northern Italy. Between 2001 and 2005, the population-based registry database of the Istituto Oncologico Romagnolo identified 986 first-time patients with esophageal cancer. We collected and compared data from patients diagnosed between 2001 and 2004 (n=764) with the aim to evaluate the patterns of care in Emilia-Romagna and to assess the presence of the potential bias related to the progression of the disease. The median age was 67 years (range: 34-91 years). After a median follow up of 44 months, 589 cases were dead (64.5%). The standard treatment for all patients in curative intent was surgical resection. Definitive concurrent chemoradiation (CRT) was administered in 142 patients (15.6%). In patients with c-stage I, the surgical rate was 100% with a five-year survival of 90%; in patients with c-stage II, the surgical rate was 70% (five-year survival 53%); among patients with c-stage III, the surgical rate was 15.3% with a five-year survival of 29.3%. The mortality rate during definitive CRT was 26.5% (95% CI: 19.9-33.1). The present data showed a low rate of esophagectomy performed in a community cancer registry

database, despite a significant survival benefit. A major concern was the low rate of surgery in curatively resectable c-stage II patients and the significant deterioration in mortality rate during CRT. To obtain
